

DBMS Mini-Project

Synopsis

Mini Project Title: - Traffic Violation Tracking System

Problem Statement:

The Traffic violation tracking System is a mini-project designed to facilitate efficient traffic law enforcement and violation management by the police department. The system aims to streamline the process of issuing traffic violation invoices to violators and maintaining accurate records of violations and payments.

The system provides a user-friendly interface for traffic police officers to manage various tasks related to traffic violations.

Goals:

The Traffic violation tracking System aims to automate and simplify the process of traffic violation management, reducing manual paperwork and improving overall efficiency. By maintaining accurate records and providing insightful reports, it helps traffic police departments to enforce traffic rules effectively and promote road safety.
